

Client: Spencer Stephenson

Unit #: 123

CLUBROOT DISINFECTION REPORT

DATE	Date: 1995-11-08
UNIT NUMBER	Tech: Liam Dave Kircher Liam David
DESCRIPTION	Supervisor: Spencer
LOCATION	GPS: 49.497682,-119.590669

The unit was thoroughly cleaned, encompassing several steps. This included a high-pressure hot water wash, a water rinse, and the application of a concentrated bleach solution. The bleach was applied to the vehicle's underside, including the tires, rims, wheel wells, frame, suspension, axles, and more. It's important to note that the bleach solution employed contained 6% sodium hypochlorite.

The checklist and accompanying images below serve as evidence that the disinfection process adhered to the specified standards and was executed accurately.

STEPS	CHECK WHEN COMPLETED
Step 1: Pre-wash Visual Inspection (note areas of dirt/debris accumulation)	Notes: The unit had a light coating of dust and grime and did not require in-depth pre-cleaning. HD equipment service.
Step 2: Before Wash Photos	[X] Left Side [X] Right Side [X] Underside [X] Wheel Well
